

Enfocus PitStop 10 Pro

PitStop Pro has everything you need for fast and reliable preflighting and editing of PDF documents. It not only provides a systematic and thorough detection of all possible problems, it also enables you to edit and correct them in a matter of seconds. Without ever having to leave your familiar Adobe Acrobat environment.

Use pre-defined settings based on industry standards...

The PitStop Pro preflight engine contains pre-defined settings to detect typical problems. All settings are based on the current best practices of graphic designers and printers worldwide, and use industry standards such as PDF/X and the Ghent PDF Workgroup specifications.

... or customize according to your own specifications

You can modify our pre-defined settings or create your own to correct PDFs according to the unique specifications of your clients, publishers, printers, or user associations. You can also configure your customized workspace with your own toolbars, presets, and favorites.

Accurate preflight information always available

PitStop Pro uses Certified PDF technology to register all preflight information, including all changes that have been made, when, and by whom. All preflight results are embedded in the actual PDF file and certified.

A report of the preflight result is available and the navigator automatically leads you to the problem objects and offers solutions to fix them.

Comprehensive quality check

Detect any type of problem within your PDF documents — before they lead to costly reprints.

- Font issues
- Incorrect colors
- Transparency
- Low resolution images
- Problems with hairlines
- Missing trim and bleed boxes
- Objects and colors that will not print

Wide range of editing tools

Edit and correct PDF documents fast and easily — because a deadline is always imminent.

- Correct text errors
- Convert colors
- Move, rotate, and scale objects
- Renumber pages
- Apply stamps
- Insert cover pages

A powerful preflight tool

Standardize and automate procedures — saving invaluable time during production.

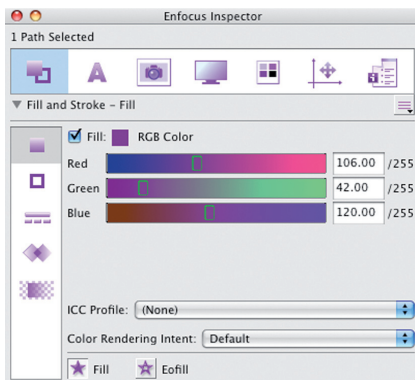

- **Action Lists.** Create or use pre-defined lists of actions to be taken to fix problems.
- **Global Changes.** Implement changes throughout your entire document, with a single click.
- **Preflight Profiles.** Perform multiple quality checks, combined with automatic fixes and detailed reporting.
- **QuickRuns.** Combine Action Lists, Global Changes, and a Preflight Profile to detect and correct reoccurring issues in a matter of seconds.

Highlights

Detailed and accurate support for color handling

PitStop Pro 10 offers new and improved tools to handle color issues in an easy and straightforward way. The Color Picker has been redesigned to add and find spot colors intuitively. The new version also allows you to check the ink coverage of PDF objects, while handling transparency, overprint settings, overlapping items and layers. You can also use black point compensation with Little CMS or Adobe CMM.

PitStop Workgroup Manager for multi-user environment

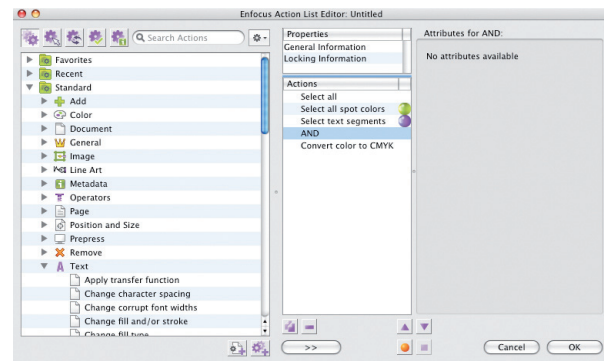

The workgroup functionalities in PitStop Pro 10 enable you to centrally manage and standardize presets in multi-user environments. You can share Action Lists, Preflight Profiles, Global Changes and workspaces among different collaborators and attribute user rights. This helps you to apply policies throughout your organization, and makes sure presets are used correctly and consistently.

The PitStop Workgroup manager is available with Floating Licenses, where copies of PitStop Pro can be installed on any number of terminals within a local area network, but only a certain number can be used simultaneously. It also allows you to manage these floating licenses in a centralized way.

Faster and easier in every respect for every user

- QuickRuns can now include Global Changes, which enable you to apply changes throughout entire documents.
- The Design Layout setup and management of page boxes and guides have been enhanced, offering much more graphical features.
- Search functionalities on the Font Picker make it easier to add and find the right fonts.
- Shortcuts enable you to move objects over a greater distance.
- Drag-and-drop functionalities make creating Action Lists much easier.
- Groups of actions in an Action List improves the overview
- When making a selection in an Action List, the parts to which it applies are automatically highlighted.
